

Ashness

Shamley Green

The construction of a luxury new build house in Shamley Green which was built as a family home for the client.

“Ashness” is spread over three floors and contains 6 bedrooms and 5 bathrooms. In addition, there is a self-contained annex and pool room, an outdoor entertaining space, an outdoor heated pool, a large stable block and detached double garage.

The house was built using conventional building techniques, including concrete floors, masonry walls, and a clay tiled roof. The annex and pool room were built into the hillside and formed with a concrete roof and walls, and a glass frontage. The entrance to the house was finished with a large resin bound driveway.

The fit out incorporated wood burning stoves, a Loxone music system and a back-up generator. In addition, a ground source heat pump system was installed into an adjoining field to provide renewable energy.

“Ashness” is a magnificent country home befitting its beautiful rural location, another build O&D can be proud of.
